# Secure your network conveniently.

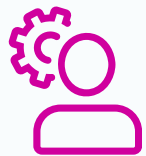

## What is Two Factor Authentication (2FA)?

ABS 2FA is a method in which a user is granted access to SAP Business One only after successfully presenting two pieces of evidence; the user's credentials, and a dynamic, one-time security code generated by the MS Authenticator application on the user's device, which is generally reset every 30 seconds.

Relying on just usernames and passwords to secure your online accounts is no longer considered safe. Your employees are using the web portal to access SAP Business One, maybe with their own personal devices, and then using those same devices for social media and other less secure communications and transmissions. If you're concerned about cybersecurity in your organization, you need to respond to this increased threat with efficient methods.

2FA add-on is the tool you need to secure your corporate network and data, enabling you to access SAP Business One remotely, securely and conveniently, with just two pieces of information.

## A simple and convenient add-on that will put your mind at ease.

Easy to setup

Extra layer of security

User-friendly

Available offline and on multiple devices
