

Powering Jordan with SAP Business One®

The first oil shale mine in Jordan, Attarat Power Company (APCO) found their legacy system slow and inaccurate, which began to affect shareholders. APCO then switched to SAP Business One which surpassed expectations.

Before: Challenges and Opportunities

- Attarat Power Co. was originally using Microsoft Excel Spreadsheets for reports and tracking, which was a time-consuming process due to the large amount of data input required.
- This process was prone to human error and required data to be manually checked and backed up.
- Inaccurate reports began to impact the company's bottom line and affect shareholders. An immediate solution was required.

Why SAP and ABS

- APCO management team was looking for a reliable, international brand and SAP fit the bill perfectly.
- SAP Business One was found to be a cost-effective way to unite the entire organization on a single platform (including APCO's sister companies; Attarat Mining Company and Attarat Operation and Maintenance Company).
- ABS had previous success stories in the region and provided excellent support throughout the process.

After: Value-Driven Results

- Data collation and updated reports are instantaneous thanks to the speed and connectivity provided by Cloud.
- HANA provides efficient multi-tasking and optimal data management, allowing for quicker decision making.
- These steps in turn have allowed for reduced expenses and cost savings with a lesser need for manpower.

“SAP Business One is a trustworthy and reliable software to deal with all financial issues.”

Mr. Ahmad Ghannan, Commercial Lead, Attarat Power Company

20% increase in productivity

since implementation of SAP Business One.
