

Harvesting Benefits with SAP Business One®.

The Al Hazaa Investment Group deals with wheat and grains trading in multiple countries. Coordination between the various companies in the group was a constant struggle until SAP Business One as well as Cloud and HANA were implemented. Complete control over systems and real-time data has greatly increased efficiency.

Before: Challenges and Opportunities

- Al Hazaa was running a local ERP system that could not be integrated on an organization-wide scale. They required a system that could integrate all the companies in the group.
- There was no connection present between the production and logistics divisions, leading to issues in billing and collections.
- A system was required to automate tasks and maintain control over the company's internal processes on an immediate basis.

Why SAP and ABS

- ABS came highly recommended and had previous success stories making them a natural choice of partner.
- SAP Business One was recommended as a means to maintain internal control and coordination.
- Al Hazaa was looking for an add-on that would streamline sales processes and ABS was able to provide an excellent customization for this.

After: Value-Driven Results

- Data security and storage are no longer a concern thanks to the utilization of Cloud.
- HANA provides efficient and real-time reporting from their production lines, simplifying the decision-making process.
- Thanks to SAP Business One, one global chartered accountant can consolidate the entire group's accounts.
