

Ensuring Sustainability with SAP Business One®

Philadelphia Solar Energy, a leading manufacturer of solar panels originally used a specialized accounting system, however they recognized that to execute a large-scale expansion, an integrated system that covers all operations would be required. SAP Business One fulfilled this role to perfection.

Before: Challenges and Opportunities

- Microsoft Excel Spreadsheets was used for tracking and reporting purposes, which was a time consuming and error-prone process.
- The lack of detailed analytics meant Philadelphia were unable to track the actual costs of products.
- This resulted in missed opportunities, a situation that needed to be corrected as quickly as possible.

Why SAP and ABS

- The management executed a cost-benefit analysis, which concluded SAP Business One would best serve their needs.
- SAP Business One is an extremely flexible system that is well-suited for SMEs.
- ABS came with industry-specific knowledge that gave them an advantage, and provided a consistently high level of support throughout and post implementation.

After: Value-Driven Results

- With SAP Business One's real-time reporting, Philadelphia Solar is able to monitor and optimize their product pricing.
- An integrated ERP system allows exact cost tracking and management, which facilitated savings on expenses.
- Inventory management has been greatly simplified, all items in the inventory can be accounted for at a click.

“SAP Business One has **supported our business** exactly as per our requirements.”

Mr. Eyad Arafat, CFO, Philadelphia Solar Energy

100% rise in productivity

since SAP Business One Implementation.
