

Keeping an Eye on Business with SAP Business One® Security and Controls

The leading provider for smart systems and security access controls in Jordan, Al Khader for Smart Systems - Smartzone, reached out to ABS to implement SAP Business One with industry specific customizations.

Before: Challenges and Opportunities

- Smartzone's previous software was local and specialized, dealing only in inventory or invoicing, and could not be integrated on a single platform.
- Disconnection between departments led to spiraling costs for Smartzone.
- New software was needed to eliminate errors in operations.

Why SAP Business One and ABS

- SAP Business One was well-suited for smaller companies and the modules covered Smartzone's industry.
- ABS provided support and add-ons that allowed the use of industry-specific user and programming manuals.
- ABS offers e-commerce integration with SAP Business One, which is Smartzone's vision for the near future.

After: Value-Driven Results

- Smartzone now has excellent control over the costs being incurred organization wide.
- Financial transactions are now automated and streamlined with minimal operating costs.
- Automated replies to transactions have been implemented, and Smartzone are looking to integrate SMS into the system to make information more accessible to clients.

"We would be unable to function without SAP Business One as **our entire company is now dependent on it.**"

Mr. Malik Alkhader, CEO, Al Khader for Smart Systems - Smartzone

50% rise in productivity

since implementation of SAP Business One.
